Immanent Lead Engine

V1 Product Structure & AI Builder Specification

Internal Client Acquisition System • Version 1.0

1. V1 Product Objective

The Immanent Lead Engine V1 is an internal, single-user-first web application designed to help Immanent Studio systematically acquire small-business website clients.

The V1 must support this complete core journey:

```
Business → Lead → Qualification → AI Analysis → Score → Outreach → Follow-up → Proposal → Client → Revenue
```

The product should reduce repetitive manual work while keeping final outreach approval under human control.

2. V1 Scope

V1 includes:

- Authentication
- Dashboard
- Lead discovery and manual lead entry
- CSV lead import
- Lead list, search and filtering
- Lead profile
- Lead scoring
- AI lead analysis
- AI personalized outreach generation
- Outreach history
- Follow-up scheduling and reminders
- Campaign management
- Basic proposal management
- Lead-to-client conversion
- Basic revenue and conversion analytics

Explicitly excluded from V1:

- Automated Instagram DM sending
- Automated WhatsApp messaging
- Mass unsolicited messaging

- Full email marketing platform
- Payment processing
- Client portal
- Mobile application
- Team management and complex permissions
- Advanced AI agents
- Complex scraping infrastructure
- SaaS billing or multi-tenant functionality

3. Primary User

The primary V1 user is the Immanent founder/sales operator. The interface should be optimized for one person researching prospects, reviewing AI recommendations, sending outreach, following up, and closing clients.

4. Main Navigation / Information Architecture

```
Dashboard
Leads
Discover
Outreach
Campaigns
Proposals
Clients
Analytics
Settings
```

5. Dashboard

Purpose: answer “What should I do today to generate revenue?”

Dashboard sections

- Revenue overview: Pipeline Value, Won Revenue, Active Leads, Clients
- Lead metrics: Total, New, Qualified, Contacted, Interested, Proposal, Won, Lost
- Today's actions: Follow-ups due, Qualified leads, Messages awaiting approval, Pending proposals
- Sales pipeline: New → Qualified → Contacted → Interested → Proposal → Won/Lost
- Recent activity: Lead creation, outreach, follow-ups, proposals, conversions

6. Leads

Lead list should be the central working area.

Lead fields

Field	Required?	Purpose
Business Name	Yes	Identify the prospect
Industry	Yes	Classify prospect

Location	No	Geographic context
Website	No	Assess online presence
Instagram	No	Assess social presence
Facebook	No	Assess social presence
LinkedIn	No	B2B prospecting
Email	No	Outreach
Phone	No	Contact
Contact Person	No	Personalize outreach
Source	Yes	Track acquisition source
Notes	No	Manual observations

Lead status

```
NEW → QUALIFIED → CONTACTED → INTERESTED → PROPOSAL → WON / LOST
```

Additional statuses: NURTURE and ARCHIVED.

7. Lead Discovery

V1 discovery is intentionally simple. The system must work without external scraping.

Supported source labels:

- Google Maps
- Instagram
- Facebook
- LinkedIn
- Apollo
- Referral
- Directory
- Manual
- Other

V1 import requirement: CSV import with duplicate detection using website, or business name + location, or social profile.

8. Lead Profile

The Lead Profile is the command center for a single prospect.

- Business information
- Contact information
- Online presence
- AI analysis
- Lead score and priority
- Opportunity analysis
- Recommended offer and price
- Outreach history
- Follow-ups

- Activity history

9. AI Lead Analysis

Primary action: “Analyze Lead with AI”.

The AI should return:

- Business Summary
- Online Presence
- Website Status
- Primary Problem
- Customer Journey
- Business Opportunity
- Recommended Solution
- Recommended Package
- Suggested Price
- Lead Score
- Reason for Score
- Suggested Outreach Angle

AI quality rule: never invent facts. If information is unavailable, return “Unknown / Not available”.

10. Lead Scoring

Signal	Points
No website	+20
Poor/outdated website	+15
Strong social presence	+15
Clear services	+10
Quality images/content	+10
Good reviews	+10
Established business	+10
Clear contact information	+5
Good target market	+5
Score	**Priority**
80–100	High Priority
60–79	Good
40–59	Maybe
0–39	Low

11. Outreach

The outreach system supports personalized, human-approved communication.

V1 channels:

- Instagram

- Email
- Manual WhatsApp
- LinkedIn

Workflow:

```
AI generates → Founder reviews/edits → Founder approves → Message is sent → Activity is recorded
```

12. AI Outreach Generator

The generator should use the business name, industry, location, website status, social presence, problem, opportunity and recommended offer.

Message structure:

- Personal observation
- Problem/opportunity
- What Immanent can help with
- Low-friction call to action

Avoid generic mass-message language.

13. Follow-up Engine

Default sequence:

```
Day 0 — Initial outreach
Day 2 — Follow-up #1
Day 5 — Follow-up #2
Day 10 — Final follow-up
No response — Move to Nurture
```

Intervals must be configurable. The system creates reminders/tasks; it does not mass-send messages.

14. Campaigns

Campaigns organize leads by industry, location, source or outreach experiment.

- Lagos Salons — August 2026
- Nigerian Restaurants — August 2026
- Lagos Real Estate — September 2026
- UK Cleaning Businesses — September 2026

Campaign metrics: Total Leads, Qualified, Contacted, Replies, Interested, Proposals, Won, Revenue, Conversion Rate.

15. Proposals

Proposal flow:

```
Interested → Discovery → Proposal → Payment → Client
```

Proposal fields: package, price, payment terms, scope, status, created date, sent date, accepted date.

16. Initial Website Offers

Package	Price	Timeline	Core scope
Starter	₦150,000	3–5 working days	1-page responsive business website, services, gallery, WhatsApp CTA, map, social links, basic SEO, deployment
Business	₦250,000	5–7 working days	Up to 5 pages, custom UI/UX, contact form, gallery, WhatsApp, map, social integration, basic SEO, deployment, 7-day support
Premium	₦400,000	7–10 working days	Up to 8 pages, advanced UX, custom sections, booking/request flow, advanced forms, analytics, basic performance optimization, 14-day support

Default payment terms: 60% upfront and 40% before final launch/handover. Terms must be editable per proposal.

17. Clients

When a proposal is accepted and payment is received, convert the lead to a client.

- Business
- Contact
- Project
- Package
- Project Value
- Amount Paid
- Balance
- Start Date
- Deadline
- Project Status
- Project Link

- Notes
- Testimonial
- Case Study

Project statuses: NOT STARTED, IN PROGRESS, CLIENT REVIEW, COMPLETED, ON HOLD, CANCELLED.

18. Analytics

V1 analytics must focus on revenue and sales activity.

- Total leads
- New leads
- Qualified leads
- Contacted leads
- Interested leads
- Reply rate
- Interested rate
- Proposal rate
- Close rate
- Pipeline value
- Won revenue
- Average project value
- Revenue by lead source
- Conversion by campaign

19. Core Data Model

Lead

```
id

```

20. Recommended Technical Direction

Recommended implementation:

Layer	Recommendation
Frontend	Next.js / React
Database	Supabase / PostgreSQL
Authentication	Supabase Auth
AI	LLM API
Automation	n8n
Deployment	Vercel or equivalent

The AI builder may substitute technologies if necessary, but must preserve the product behavior and data model.

21. V1 Development Timeline

Phase	Duration	Deliverables
Phase 0	1–2 days	IA, user flow, database schema, scoring logic, AI workflow, wireframes
Week 1	15–20 hrs	Auth, dashboard, leads, lead profile, status, search, filters, database
Week 2	15–20 hrs	AI analysis, scoring, opportunity, offer recommendation, pitch generation
Week 3	15–20 hrs	Templates, AI outreach, approval, history, follow-ups, reminders
Week 4	10–15 hrs	Campaigns, proposals, client conversion, revenue analytics
Week 5	10–15 hrs	Real-world testing, bug fixes, optimization, deployment

22. V1 Definition of Done

V1 is considered complete when the founder can perform this workflow inside the application:

1. Create or import a business lead.

2. View and edit the lead.
3. Analyze the lead with AI.
4. Receive an explainable lead score.
5. See the identified business opportunity.
6. Receive a recommended Immanent Studio package.
7. Generate a personalized outreach message.
8. Review and approve the message.
9. Record/send outreach manually.
10. Receive automatic follow-up reminders.
11. Move the lead through the sales pipeline.
12. Create and manage a proposal.
13. Convert a won lead into a client.
14. Track project value, payments and revenue.
15. Measure lead-source and campaign performance.

23. Critical Product Principles

- Build for revenue, not feature quantity.
- Keep the V1 single-user-first and simple.
- Automate research, scoring, personalization and reminders before automating external messaging.
- Keep human approval before outreach.
- Do not fabricate business information.
- Do not build mass-spam functionality.
- Every screen must have a clear sales or operational purpose.
- The system should be responsive and usable on desktop and mobile.
- Design the architecture so future integrations can be added without rebuilding the core.

24. Future, Not V1

- Automated lead imports
- Google Maps integrations
- Social/API integrations
- Automated email integrations
- Advanced AI research agents
- Website quality auditing
- Automated proposal generation
- Website concept generation
- Client onboarding
- Project management
- Payment integration
- Potential SaaS version

25. Builder Instruction

Build the Immanent Lead Engine V1 as an internal, responsive web application. Do not expand the scope beyond the specification above without explicit approval. Prioritize a clean information architecture, fast lead entry, clear pipeline visibility, explainable AI recommendations, human-approved outreach, reliable follow-up tracking, and measurable revenue outcomes.

The core product question is: Can the system consistently help Immanent Studio find, qualify, contact, follow up with and convert small businesses into paying website clients?
